

AbleSpace Take Data Feature: Walkthrough & Product Review

Overview:

This document walks through a hands-on evaluation of the **Take Data** workflow inside AbleSpace from a user perspective. It covers how to record student data during a session, followed by practical observations on where the user interface feels smooth and where it could be improved.

Part 1: Step-by-Step Workflow Walkthrough

1. Opening the Student Caseload

When you first log in, start by clicking **Caseload** on the left sidebar menu. This brings up the main roster of assigned students, displaying standard info like IEP dates, school location, and service minutes. To start tracking a session, locate the target student and click the blue **Take Data** button on the far right.

Full Name	Last Name	IEP Due	Eval Due	Collaborators	Service Time	School	Site	Actions
Demo Student1	Student1	03/26/2023	03/25/2023	LA	30 % Categorize	Demo School1	-	Take Data
Demo Student2	Student2	03/02/2023	02/28/2023	LA	60 % Categorize	Demo School2	-	Take Data

2. Selecting a Goal to Track

Clicking **Take Data** opens up the tracking workspace for that specific student. On the left pane, you see a full list of all active IEP goals (e.g., Social Studies, Writing, Math). Selecting a goal updates the main screen with the corresponding tracking tools for that objective.

3. Recording Data & Using the Counters

Depending on the goal type, the interface adjusts how you log progress:

- **Simple Goals:** Uses a clean, straightforward **+** and **-** counter box to log quick attempts or trials.
- **Complex/Accuracy Goals:** Selecting a goal like Math opens up a detailed panel with separate buttons for **Correct (+)**, **Incorrect (-)**, and **Prompts (P)**. Tapping these during a lesson automatically calculates total attempts and live accuracy percentage at the top. You can also log session observations in the bottom notes box.

4. Viewing Performance Graphs

After logging your counts, click the **Graph** tab at the top of the workspace. The application takes the recorded entries and automatically plots them onto a visual progress line chart showing performance trends over time.

Part 2: UX/UI Feedback & Improvement Ideas

After testing out the workflow, here are key areas where the design and functionality could be polished for better classroom efficiency:

- **Clearer Zero-State Displays:** Opening a standard trial counter before entering anything displays a small dash (–) inside the box. Showing an explicit 0 or 0 Trials label makes the empty state immediately clear.
- **Better Visual Separation for Sub-Goals:** Sub-objectives (like 3.1 and 3.2) sit right underneath main goal cards with minimal indentation. Adding stronger indentations or visual branch lines makes the goal hierarchy easier to scan during active tracking.
- **Option for Quick Numeric Typing:** The current UI relies on repeatedly tapping + and – buttons. Adding a direct text input field alongside incremental tap controls will speed up retrospective entries from paper notes.
- **Visual Confirmation When Saving:** Data saves automatically on interaction, but providing a brief checkmark or transient notification confirms backend persistence clearly.
